Company Overview

Marine Services & Consultant (HK) Limited supports shipowners and ship managers with technical procurement, repair execution and operational requirements for vessels. Every enquiry is assessed against maker documentation, technical specifications, vessel operating conditions, delivery schedules and commercial constraints before the most appropriate execution strategy is selected.

Execution is driven by technical and operational requirements rather than a fixed procurement model. Depending on the application, requirements may be fulfilled through OEM supply, equivalent replacement, workshop overhaul, local fabrication, onboard attendance, riding crew deployment or coordinated repair, with each approach selected according to suitability, lead time and operational impact.

Key Procurement Benefits

Economies of Scale: Consolidated purchasing maximises buying power and reduces procurement costs through higher volume sourcing.

Fleet Procurement Standardisation: Standardised sourcing across multiple vessels to support consistent specifications, simplify inventory management and improve procurement efficiency.

Coordinated Supply: Coordinated delivery across multiple ports to support planned maintenance schedules and operational requirements.

Supply Highlights

Hong Kong

Medicine Chest Replenishment & WHO Certification

Complete replenishment of vessel medicine chest, including inventory verification, statutory review, and WHO Medical Chest Certificate renewal within 24 hours notice.

China · Indonesia

PPE Bulk Supply

Consolidation of PPE requirements across five vessels, specification verification, quantity reconciliation, supply consolidation and sea freight from China for cost-effective bulk purchased delivery in Indonesia.

Brazil

Integrated Vessel Stores Package

Supply of deck, engine, cabin and galley stores under a single requisition, including substitute maker identification, split shipment management, urgent additions and coordinated delivery onboard.

Denmark · Netherlands · Chile

Draft Fan Motor

Sourced through local partner in Denmark, verified technical specifications and maker compatibility, expedited delivery to the Netherlands and coordinated onward freight to vessel in Chile.

Service Highlights

Malaysia

Windlass Repair

Removal of the port side windlass using shore crane support, followed by remachining of the spare bushing to restore design tolerance before onboard reassembly, testing and return to service.

Netherlands

9 Ton Anchor Replacement

Replacement using a crane vessel 55T, including lift planning, recovery of the existing anchor assembly, installation of replacement unit, and reconnection of the anchor chain through a kenter shackle assembly.

Argentina

Electric Motor Repair

Local overhaul of a failed main air compressor motor, including dismantling, winding assessment, bearing replacement, rotor balancing and final workshop testing before return to service.

Hong Kong · Australia

Riding Crew Mobilisation

Mobilisation of two certified welders and one mechanical fitter within 28 hours to complete MO32 repair works during vessel transit, allowing repairs to be executed before arrival in Brisbane.

Global Network

Supporting vessel operations through an established global network of suppliers, workshops and service partners.

Detailed operational coverage by country and port is available upon request.

Technical & Commercial Advantages

Technical Verification

Maker references, electrical ratings, dimensions and vessel requirements are verified before sourcing to reduce compatibility risk and onboard delays.

Port Call Constraints

Changing ETAs, short port stays and boarding restrictions require execution within narrow operational windows where planning and timing are critical.

Global Availability

When local stock is unavailable, established international supply routes expand sourcing options without limiting procurement to a single market.

Regulatory Requirements

Support extends to statutory equipment and certification requirements including medical chest renewals, gas calibration and safety equipment documentation.

Shipment Optimisation

Combining multiple requirement categories into coordinated shipments can reduce freight movements, simplify logistics and improve delivery efficiency.

Technical Network

Access to specialised workshops, riding crews and technical service providers enables support aligned with equipment type, location and operational requirements.

From urgent spares to onboard attendance, MSACHKL supports the technical and commercial pressure points behind vessel operations.

Trusted by Industry Leaders

Supporting technical and procurement requirements for international shipowners, ship managers and marine operators across global trading routes.

Relationships shown reflect commercial relationships and completed projects across vessel supply, repair and technical service activities.

Contact Information

For vessel requirements, technical support and procurement enquiries, our team is available to assist worldwide.
